Bachelor of Science in Information Technology

Case Study Activity: "Responsive Web Design for The Bistro Café"

A Web Development Project
*Presented to the Faculty of the
College of Information Technology*

**In Partial Fulfillment of the Requirements for the Course
Introduction to WebTechnologies**

Prepared by:
Loking, Rimuel D.

*BSIT 2.5
National Teachers College*

Instructor:
Jay Vee L. Capiral

Date:
March 13, 2026

Part 1: Analyze the Current Design Issues

The current website of the said Bistro Cafe has several problems when viewed on different screen sizes. I think the issue is the use of fixed widths for the layout because the content becomes too wide on smaller screens like mobile phones. Users need to scroll sideways just to read the text or see images, which is not convenient. Also, the navigation bar on mobile devices as the menu items stay in a horizontal line which makes the text very small and hard to tap. The images and text also do not adjust properly. Some images appear too large on small screens, while the text does not scale well. The footer also has problems because instead of staying properly at the bottom of the page, it sometimes overlaps with other content or looks compressed on smaller screens. Overall, the website does not adjust well to different screen sizes, and the users may have a hard time browsing the website on phones and tablets.

Part 2: HTML Structure

Code:

```
<!DOCTYPE html>
<html>
<head>
  <title>The MiFood Restaurant</title>
  <link rel="stylesheet" href="cssDesigns.css">
</head>

<body>

  <header>
    <h1>The MiFood Restaurant<hr></h1>
    <nav>
      <ul class="nav-menu">
        <li><a href="#"><br>Home</a></li>
        <li><a href="#"><br>Menu</a></li>
        <li><a href="#"><br>Testimonials</a></li>
        <li><a href="#"><br>Contact</a></li>
      </ul>
    </nav>
  </header>

  <main class="main-grid">
    <section class="menu">
      <h2>Our Menu</h2>
      <p><br>• Sherbet ni Chris Brown</p>
      <p>• Hungarian ni Neneng B</p>
      <p>• Umuusok na Dragon Fruit ni Kaido</p>
      <p>• Mochi na pinupukpok sa Japan</p>
      <p>• Ice Cramble na hindi nahuhulog</p>
```

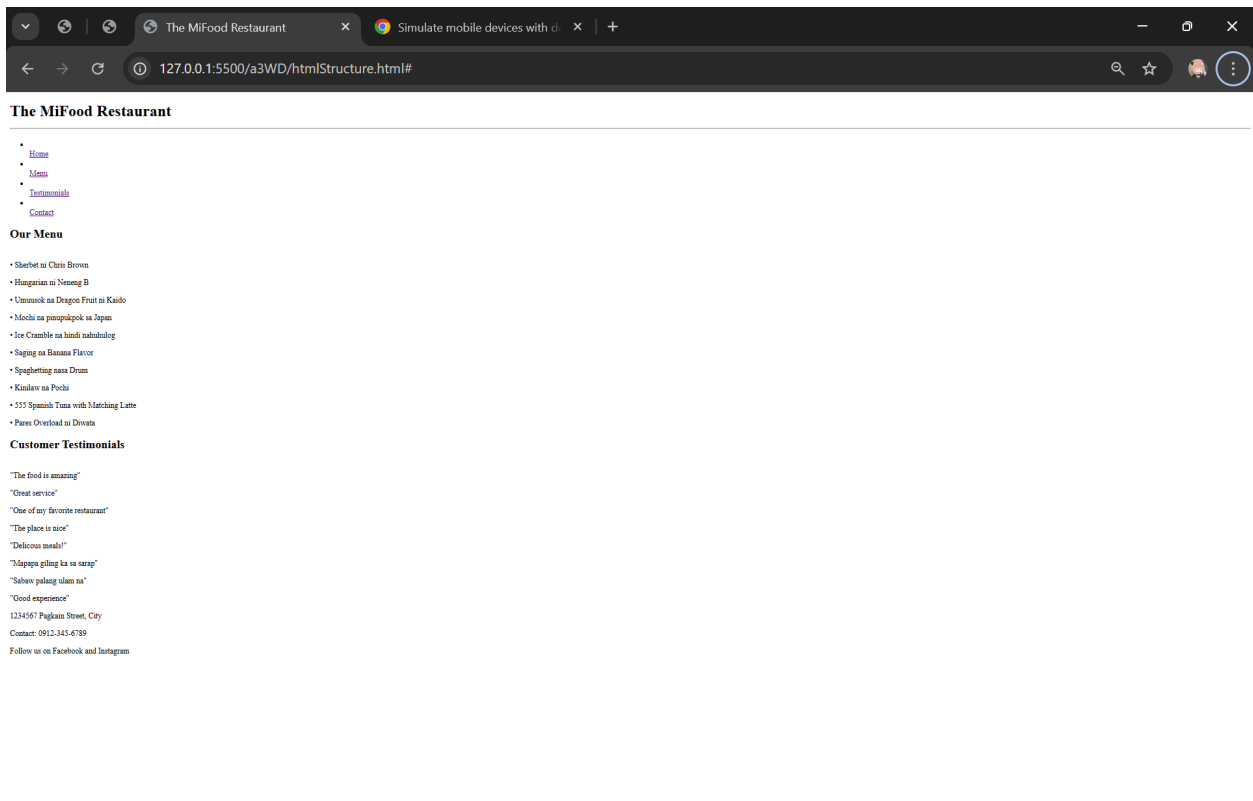

```
<p>• Saging na Banana Flavor</p>
<p>• Spaghetting nasa Drum</p>
<p>• Kinilaw na Pochi</p>
<p>• 555 Spanish Tuna with Matching Latte</p>
<p>• Pares Overload ni Diwata</p>
</section>

<section class="testimonials">
  <h2>Customer Testimonials</h2>
  <p><br>"The food is amazing"</p>
  <p>"Great service"</p>
  <p>"One of my favorite restaurant"</p>
  <p>"The place is nice"</p>
  <p>"Delicious meals!"</p>
  <p>"Mapapa giling ka sa sarap"</p>
  <p>"Sabaw palang ulam na"</p>
  <p>"Good experience"</p>
</section>
</main>

<footer>
  <p>1234567 Pagkain Street, City</p>
  <p>Contact: 0912-345-6789</p>
  <p>Follow us on Facebook and Instagram</p>
</footer>

</body>
</html>
```

Web Screenshot:

Part 3: Apply Flexbox and CSS Grid for Layout

Code:

```

*{
    box-sizing: border-box;
    margin: 0;
    padding: 0;
}

body{
    font-family: Arial, sans-serif;
    line-height: 1.6;
}

header{
    background-color: #333;
    color: white;
    padding: 1rem;
}

.nav-menu{
    list-style: none;

```

```
    display: flex;
    flex-direction: column;
}

.nav-menu li{
    margin: 0.5rem 0;
}

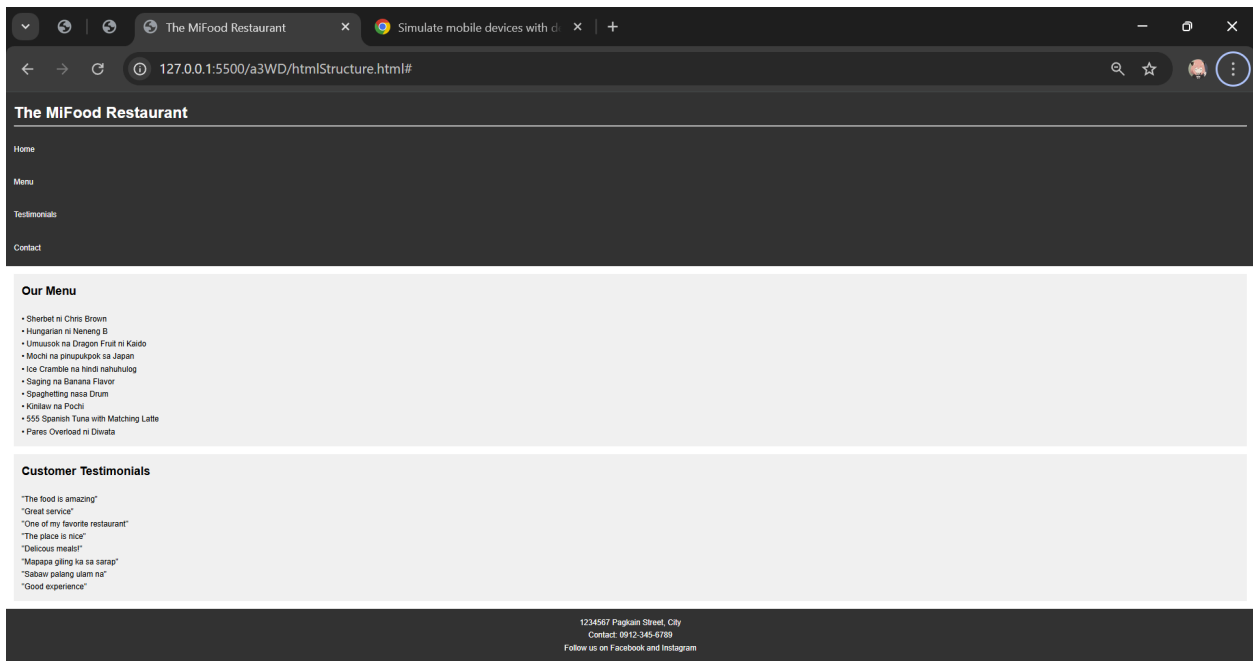

.nav-menu a{
    color: white;
    text-decoration: none;
}

.main-grid{
    display: grid;
    grid-template-columns: 1fr;
    gap: 1rem;
    padding: 1rem;
}

.menu, .testimonials{
    background: #f4f4f4;
    padding: 1rem;
}

footer{
    background: #333;
    color: white;
    text-align: center;
    padding: 1rem;
}
```

Web Screenshot:

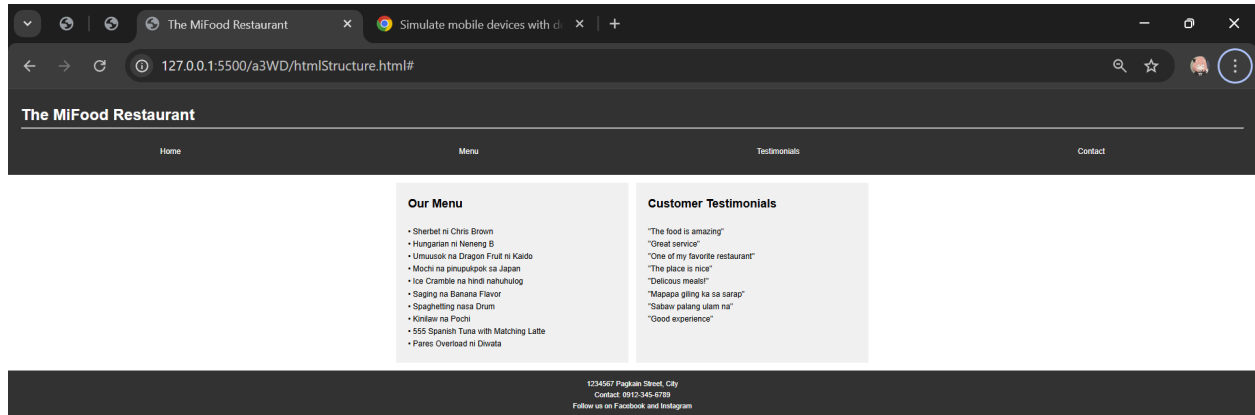

Part 4: Implement Media Queries

Code:

```
/* Tablet screens */
@media (min-width: 768px){
    .nav-menu{
        flex-direction: row;
        justify-content: space-around;
    }
    .main-grid{
        grid-template-columns: 1fr 1fr;
    }
}

/* Desktop screens */
@media (min-width: 1025px){
    .main-grid{
        max-width: 1000px;
        margin: auto;
    }
}
```

Web Screenshot:

I used 768px as the first breakpoint for tablets because screens become wider and can support two columns. With this size, the navigation menu changes from vertical to horizontal, and the content changes to two columns.

I used 1025px for desktop screens so that the layout stays in two columns but since the width is limited, the content does not stretch too much on large screens.

Part 5: Use of Responsive Units

Code:

```
body{
  font-size: 1rem;
}

header h1{
  font-size: 2rem;
}

.menu, .testimonials{
  padding: 1.5rem;
}
```

```
footer{
  font-size: 0.9rem;
}

.main-grid{
  width: 90%;
}

header{
  padding: 2vh;
}
```
