

National Teachers College

629 J Nepomuceno, Quiapo, Manila, 1001 Metro Manila
Bachelor of Science in Information Technology

Individual Activity: “*Make Your Web Page Come Alive!*”

A Web Development Project
*Presented to the Faculty of the
College of Information Technology*

**In Partial Fulfillment of the Requirements for the Course
Introduction to WebTechnologies**

Prepared by:
Loking, Rimuel D.

*BSIT 2.5
National Teachers College*

Instructor:
Jay Vee L. Capiral

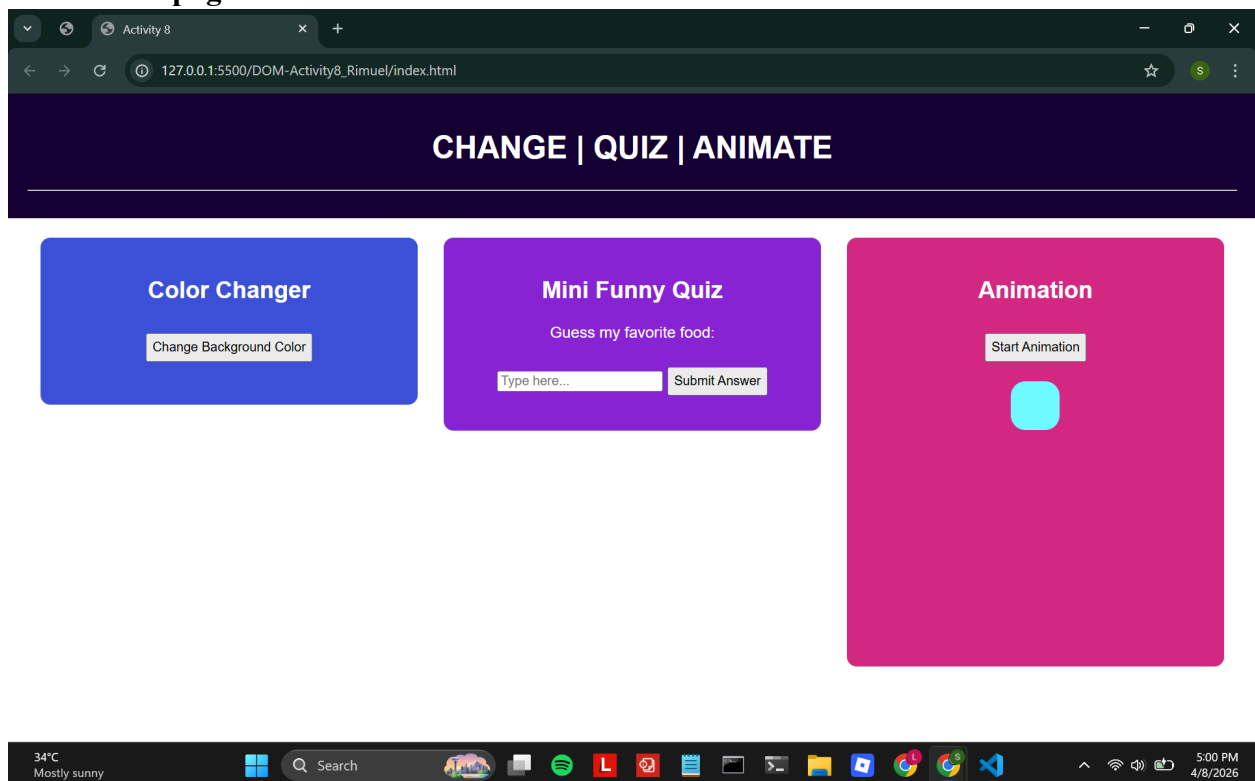

Date:
April 8, 2026

Reflection Answers:

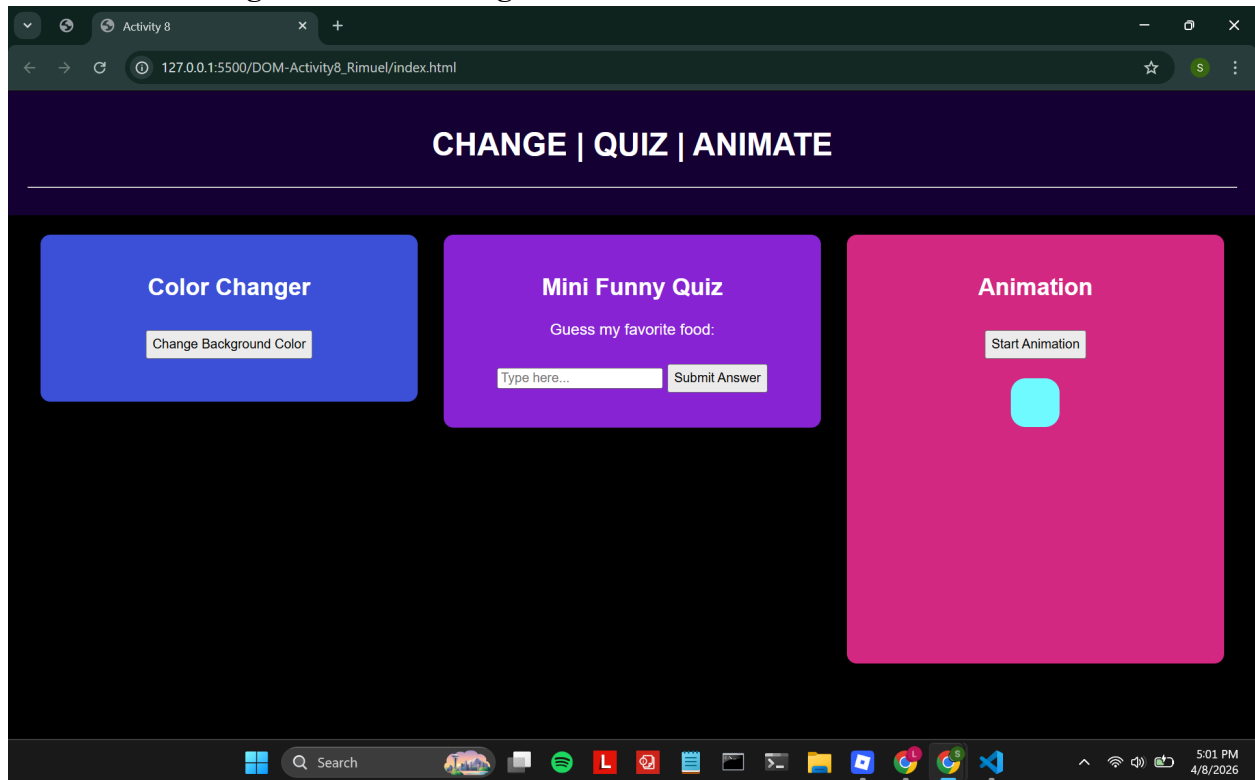

1. The most challenging part of the activity was connecting JavaScript with the HTML elements and making sure that the correct elements were selected. Although it was confusing how the getElementById works at first, I managed to finally understand it after researching and trying many functions.
2. I used the DOM by selecting elements like buttons, input fields, and then modifying their content and styles using JavaScript to allow the webpage to respond to user actions.
3. Event handling is important in real-world applications because it allows websites to respond to user interactions such as clicks, typing, and form submissions. Without events, webpages would be static and not interactive.
4. If given more time, I would improve the design and add more quiz questions. I would also add smoother animations and maybe include sound effects if possible for a better user experience.
